**Re: Installation of 30,000 Square Feet of Solar Safety Film**

**To whom it may concern,**

The purpose of this letter is to comment on the installation of solar safety window film at our Federal ESPC Project located at @@@@ San Diego, by Advanced Energy Innovations (AEI).

During the bidding process, AEI was responsive and professional, meeting all the requirements for the extensive Pre-bid Conference, specifications support, generation of Scope of Work (SOW), and accommodating all Davis-Bacon and Certified Payroll requirements.

During the vendor qualification process, we found AEI to respond quickly and comprehensively to requests for information and to provide the best value for us and for our client. Since the installation schedule included nine buildings with furniture moving in nearly every space, AEI provided full-time on-site project management which was a major factor in our client's low level of disruption and high level of satisfaction.

We recognize that it takes a professional organization to navigate the lengthy process working such a significant project from the early investigation phase through final completion (about 13 months in this case) and we are very pleased to have worked with AEI as our subcontractor on implementation of this Energy Conservation Measure (ECM) and highly recommend them to anyone considering performing solar safety window film work.

Sincerely,

**Marcel Ruegg, P.E.**  
**Project Director**
